

CONDUIT CARRIERS

Aerodynamic and durable storage

Confidently secure long material for transportation on your work vehicle.

The 5" square carrier offers greater storage capacity or volume than the alternative 6" PVC pipe solution. The aerodynamic design minimizes wind noise at high speeds. Aluminum construction is durable, lasting for the duration of your work vehicle.

Carriers are available for most ErgoRack or AluRack products in 8, 10 or 12 feet lengths.

Spliced Conduit Carrier

Spliced model carriers ship in two parts (one box) and are joined together with a padded aluminum coupler or splice to form a full size carrier comparable to a one piece design. Compact packaging for the spliced conduit carrier components was designed to minimize shipping and handling expenses or challenges.

Compact, UPS compatible, packaging

Available in 8, 10, or 12 ft

Padlock ready cap helps deter theft

Steel reinforced cap helps secure contents

Accessories

See and be seen with strobe or beacon lights mounted to your conduit carrier. Contact Prime Design to learn more.

Deter theft and secure contents with padlock ready cap.

Steel reinforcement plates behind black end caps keep contents secure - tested to 11Gs.

Lightweight and durable aluminum construction.

Powder coated aluminum extends the product's life and helps maintain the vehicle's professional image.

No drill installation maintains vehicle warranty and resale.
