MOUNTING BRACKETS TO ROOF

- 0.1** Assemble the Mounting Post to the Mounting Foot using the hardware as shown below.

- 0.2** Assemble the Mounting Top to the Mounting Post using the hardware as shown below.

- 0.3** Drill bolt holes according to the dimensions shown.

- 0.3** NOTE: The Rear Drive Shaft must not extend past the bumper of your vehicle. See Rear Drive Shaft Offset below for reference while placing your rack.

Marking and drilling distances are as shown.

- 0.4** Assemble unto vehicle roof as shown, then torque the Mounting Feet nuts to 130 in-lbs.

RIGHT ROTATION ASSEMBLY SEQUENCE

This Ladder Rack is engineered to fit a variety of vehicles and truck caps. As such, the Crossbars come without mounting holes and must be drilled to attach to the Bracket Tops after the Mounting Brackets have been installed to the vehicle or cap.

CROSSBARS

1.1 Center the Front and Rear Crossbars onto Mounting Brackets.

1.2

Measure the distance from the Crossbar's end to the outer hole of the Mounting Top. Using a grease pencil, mark the location of the hole and mark another one at exactly 2.00" on center from the first hole.

L Post holes

1.3

Prior to drilling, mark a center line along the length of the Crossbar to ensure the holes are correctly centered. The marks must align to the pre-drilled factory L Post holes.

1.4

Drill holes using a 3/8" steel drill bit.
